

Build Your Own Nokia N97
with some help from All About Symbian
www.allaboutsymbian.com

all about
symbian.com

Looking to get your hands on the Nokia N97 early, well now is your chance. Kinda. All you'll need is a pair of scissors, some glue, and a printer – before you know it, everyone will want to try your latest smartphone, even though they have to (ahem) use a bluetooth headset, and the slider mechanism is broken...

Instructions

- Print this page out on A4 paper, and cut out the N97, including the tabs.
- Score along the edges, and fold into a box shape.
- Glue each of the white tabs, and stick it all together.
- The short edges at the top and bottom will overlap, and give you the classic curved edge

Enjoy!
